EDUCATION

SVKM's Dwarkadas J. Sanghvi College of Engineering Mumbai, India
Bachelor of Technology in Computer Engineering - CGPA: 8.62 *Year of Passing - 2027*

Pioneer Junior College of Science, Dadar Mumbai, India
Higher Secondary Certificate - 84.83% *2021 - 2023*

EXPERIENCE

Cyber AI Intern Jul. 2025 – Dec 2025
DeepCytes Cyber Lab

- Designed and deployed LLM-driven automation workflows for penetration testing and vulnerability assessments, reducing manual security audit turnaround time by 40% across 50+ tested environments.
- Engineered custom prompt-engineering and agentic retrieval pipelines to analyze complex security and network logs, boosting vulnerability identification accuracy by 28% while cutting false positives by 35%
- Streamlined threat reporting pipelines by automatically generating structured, actionable remediation guides for engineering teams, accelerating Mean Time to Repair (MTTR) by 30%

PROJECTS

TreasuryPulse | *Java, Spring Boot, Spring Security, React.js, PostgreSQL, ChromaDB, Python* | GitHubOct. 2026

- Built a liquidity command center that consolidates 46K transactions across 10 entities and 9 currencies into live cash positions, replacing manual Excel reconciliation.
- Developed a 14-day Monte Carlo cash forecast with P10/P50/P90 bands and buffer-breach alerts, beating a naive baseline by 28–53% in backtests.
- Built a Spring Boot REST API with JWT role-based access and a React dashboard, exposing FX VaR and an LP-based funding optimizer behind a maker–checker approval workflow.
- Built an Agentic RAG chatbot that calls forecast, gap and what-if tools to answer analyst questions with grounded rationale and action plans.
- Verified with automated unit and API contract tests and containerized the stack with Docker.

CogniScript | *Python, Flask, React.js, LangChain, ChromaDB, MongoDB* | GitHub Dec 2025

- Engineered an end-to-end RAG pipeline using LangChain, HuggingFace embeddings, and recursive chunking to ingest multi-format documents, reducing data processing latency by 35%.
- Architected isolated per-session vector databases utilizing ChromaDB for semantic similarity search, achieving 92%+ retrieval precision and eliminating context-bleed across concurrent chat sessions.
- Designed a scalable Flask REST API featuring a dynamic LLM routing system, seamlessly integrating 5+ providers (OpenAI, Gemini, Claude, Groq) to optimize inference speed and prevent vendor lock-in.
- Developed a responsive React frontend with streaming LLM responses and automatic source citation tracking, enabling real-time contextual Q&A interactions.

CitationEdge | *Python, FastAPI, LLM Agents, RAG, Neo4j, SciBERT, spaCy* | GitHub Apr. 2026

- Built a multi-agent manuscript-review system with parallel agents for parsing, claim extraction, citation-gap detection, literary scoring and argument analysis, coordinated into one report.
- Designed a Neo4j graph memory (7 entity types) that lets agents run multi-hop Cypher queries over papers, claims and references.
- Developed a tool-using retrieval agent (Semantic Scholar API + Cypher) that scores candidate papers and ranks citation gaps into 3 priority tiers.

TECHNICAL SKILLS

Languages: Python, Java, SQL, JavaScript, HTML5, CSS3
AI/ML & GenAI: LangChain, LangGraph, Spring AI, HuggingFace, PyTorch, TensorFlow, Groq
Frameworks & Libraries: Spring Boot, Spring Security, Hibernate, FastAPI, Flask, React.js, Scikit-learn, Pandas, NumPy
Databases: PostgreSQL, MongoDB, Neo4j, ChromaDB
Concepts: REST APIs, RAG, Agentic AI, Knowledge Graphs, System Design
Developer Tools & Cloud: AWS, Docker, Git, GitHub, Postman, Claude Code

ACHIEVEMENTS

Blood Bytes: First Runner-Up in the Blood Bytes competitive programming contest.
CodeChef: 3-star rated (1639) for data structures and algorithms.
BNP Paribas Innoversite 2026: Selected among the top 300 of 55,000+ applicants in a PAN India hackathon
